Course Notes Spring 2027 Course Description: This course is an introduction to the syntactic theory of Generative Grammar, as developed by Noam Chomsky and his followers. It examines how speakers produce and understand an unlimited number of sentences and explores the principles governing how words combine to form phrases and sentences. Students will learn to analyze syntactic structure using formal representations such as phrase structure trees and will develop an understanding of the fundamental concepts of the theory. Students will apply these concepts to data from English and other languages, developing the analytical skills needed to construct, evaluate, and defend syntactic analyses. No prior knowledge of linguistics is required.
